MANUAL VER:
0.000000001

MANUFACTURER'S INTRODUCTION

Founded in the early 1950s, **Witz & Doppler** emerged from the partnership of Lenard **Witz** of Hexenfurt and Frank **Doppler**, a British precision engineer. Together, they defined a new standard in safe manufacturing - where innovation, reliability, and prestige were foundational, not optional.

Renowned for their layered defense philosophy, W&D safes are engineered to resist tampering and misdirection through mechanical logic and deliberate design. From private vaults to institutional security systems, every mechanism rewards precision and discipline.

This **Production & Operation Manual** covers all Witz & Doppler safe models, including modular security components and proprietary anti-theft techniques refined through decades of real-world use.

Each W&D safe is identified by a unique serial number - typically located on the rear of the unit - and a colored wire connected to the Anti-Theft Device mounted on the top of the safe. These identifiers are not cosmetic: they are essential for correctly interpreting module behavior and for following the proper solution paths outlined in this manual.

MODULE REFERENCE GUIDE

Use the legend below to navigate this manual.
Refer to each module's page before operation. Improper interaction may permanently lock the system or cause serious dismay.

03	 Color Order Module
04	 Casino Carousel Module
05	 Wire Fusebox Module
06–07	 Symbol Order Module

**Careful study is advised.
W&D systems punish haste.**
